

Why Capture Print Costs? Capturing printing costs has become more important as more and more documents start as electronic files. Staff increasingly prints multiple sets of documents from their desktop rather than make one original and walk to the copier. Firms today are increasingly connecting MFD's to the network, allowing high-quality, high-volume printing directly from the desktop. At many firms, more than half the hard copy production is from print. Therefore it is crucial for a firm to capture the data around its printing to enable it to recover those costs, reduce firm expenses, maximize efficiency and improve profitability.

iA Print Control is a highly configurable application that enables a firm to capture all data related to its printing. It is robust, easy to deploy and includes the following highlighted features:

- Tight integration with time-and-billing, including account code validation, processing, reporting and posting
- Captures prints destined for any network or local printers and all networked digital copiers
- Captures full details on print jobs including document name, application printed from, location, number of pages and sets printed, date, time, network login of user, printer, paper size and duplex printing
- Automatically detects color as well as black and white pages within documents for increased accuracy
- Can be configured to either pop-up on the desktop or operate in the background
- Integration with leading Document Management Systems

Benefits of iA Print Control

Capture Data Accurately iA Print Control (iAPC) is designed to capture all print data accurately. Pop-up boxes on the desktop can ensure that account, client and matter information is entered for all prints. Full details are collected, including color or black-and-white, document name, application printed from, location, number of pages and sets printed, date, time, network login of user, printer, paper size and duplex printing.

Flexible Deployment Administrators can determine the applicable page and set thresholds beyond which account, matter and client codes entry is required for the print job. Also, iAPC can be deployed in a single office or spread across many offices—even across borders.

Integration with Accounting iA Print Control integrates with all major time-and-billing systems, so that new account, matter and client codes are available in real time. Charge rates can be configured for clients based on any field captured and these rates can be maintained in different currencies for offices around the globe.

Integration with Document Management Systems iA Print Control can be integrated with a variety of document management solutions—including those provided by Open Text (Hummingbird), Autonomy (iManage) and World Software Corporation (Worldox)—to minimize the time it takes to assign a valid account code to a print job.

Ability to Force Compliance. iA Print Control can be set to run as a pop-up, forcing users to input client, matter and account information prior to printing and ensuring all data is captured.

nQueue Billback provides **COSTRECOVERY** +

WORKFLOW AND EFFICIENCY

nQueue Billback's iA helps firms collect advanced information to maximize profitability. Firms can analyze capacity, utilization and maintenance to improve workflows and deploy devices more effectively and efficiently.

MANAGING SCANNED DOCUMENTS

nQueue Billback's iA Scan does much more than tracks scans for client billing. iA Scan is template-driven so firms can easily and automatically capture, process and deliver scans directly from their MFDs, enhancing document security and helping to enforce retention policies.

EXPENSE MANAGEMENT

nQueue Billback's iA Expense Manager easily captures data from all expenses, even those incurred outside an organization's devices. Information is collected automatically as expenses are incurred and Data is more accurate to improve profitability firmwide.

DATA DRIVEN DECISIONS

In addition to capturing all expenses for potential recovery, nQueue Billback's iA provides the information to perform profitability analyses by matter, client, practice group or office to support profitability and better decision making throughout the firm.
